

SaaS Customer Retention & Churn Analysis Dashboard

Professional project documentation suitable for a GitHub repository and internship portfolio.

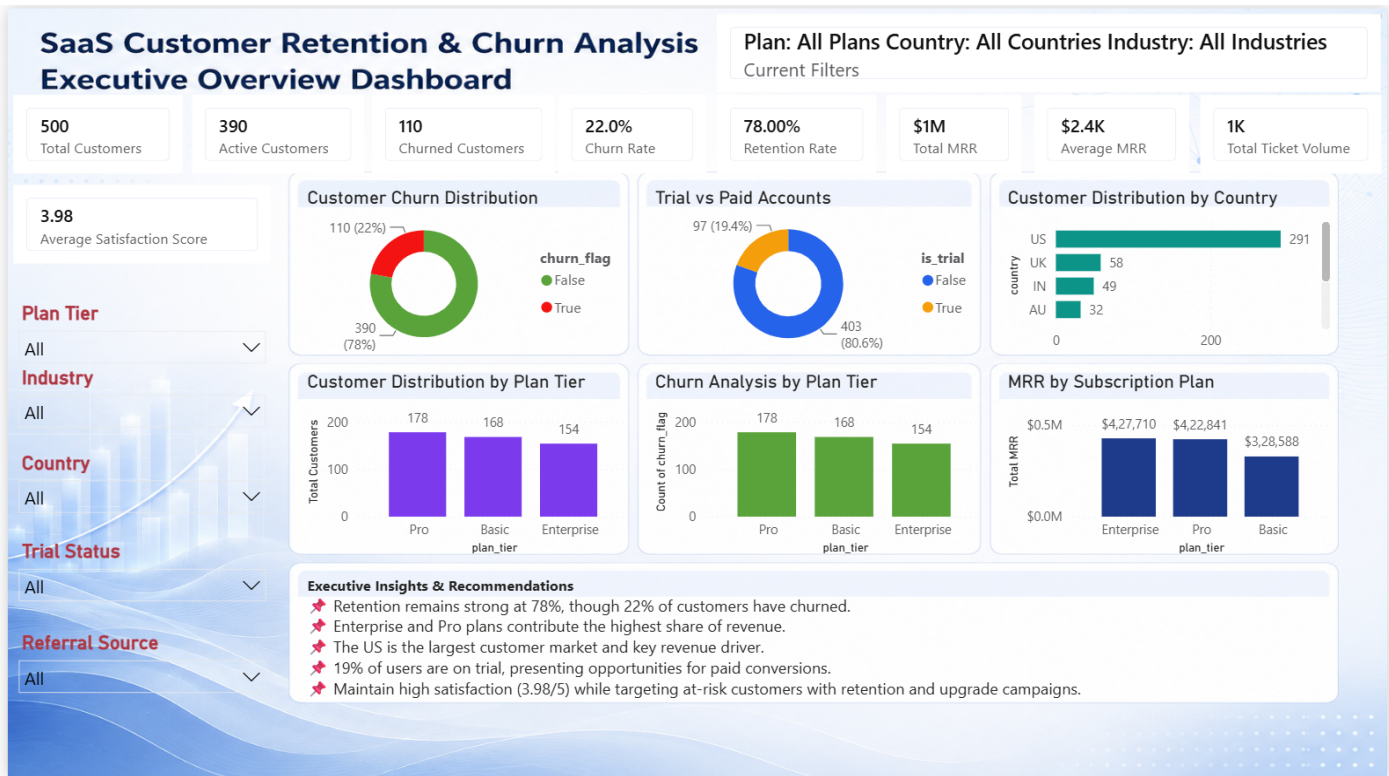

Project Overview

This project presents an executive analytics dashboard built to analyze customer retention, churn behavior, subscription performance, customer satisfaction, and feature adoption for a SaaS business. The dashboards provide actionable business insights using interactive KPIs, charts, slicers, and executive recommendations.

Objectives

- Monitor customer retention and churn.
- Identify churn drivers and customer segments at risk.
- Analyze subscription plans and Monthly Recurring Revenue (MRR).
- Evaluate customer satisfaction and support effectiveness.
- Measure beta feature adoption and upgrade/downgrade behavior.
- Deliver executive-level insights for strategic decision making.

Dashboard 1 – Executive Overview

Key KPIs include Total Customers (500), Active Customers (390), Churn Rate (22%), Retention Rate (78%), Total MRR (\$1M), Average MRR (\$2.4K), Customer Satisfaction (3.98/5), Trial vs Paid analysis, country distribution, subscription revenue analysis, and executive recommendations.

Dashboard 2 – Churn Driver Analysis

This dashboard investigates churn causes including feature issues, support quality, budget constraints, upgrade/downgrade behavior, support priority, beta adoption, and satisfaction scores. Executive insights summarize the primary business risks and recommended actions.

Technology Stack

Power BI, Power Query, DAX, Data Modeling (Star Schema), Excel/CSV datasets, KPI Cards, Donut Charts, Bar Charts, Slicers, Conditional Formatting.

Business Insights

- Retention remains healthy at 78% while churn is 22%.
- Enterprise and Pro plans generate the largest revenue contribution.
- Feature gaps and support issues are the leading churn drivers.
- Customers who downgrade plans are significantly more likely to churn.
- Beta feature adoption is low, indicating an opportunity for engagement campaigns.
- Satisfaction remains high but can be further improved through proactive support.

Learning Outcomes for Interns

Future interns can learn end-to-end BI development including data cleaning, data modeling, DAX measures, KPI design, dashboard storytelling, business insight generation, and executive reporting best practices.
